MAJOR BREAKTHROUGH in the way AEDs can now be monitored and managed. The NEW Defibnet Smart Case is here!

Its total weight is only 3kg including the AED. It can be stowed in the boot of a car and can be easily carried by its handle to any emergency including on remote work sites.

It provides 24/7 monitoring of your AED to ensure it's always in working order and will alert your trained staff instantly if the AED has been activated or is in need of attention or maintenance.

The Defibnet Smart Case enables a management plan that guarantees you are in the best position in the case of an emergency to ensure the best possible outcome.

DID YOU KNOW?

If someone has a cardiac arrest and doesn't gain access to an AED within 5 minutes, their chance of survival is less than 50%.

US Research shows that as many as 1 in 5 AEDs would currently fail in an emergency situation. This is due to AEDs not being checked daily for functionality.
